ON

Lab Attendance

Submitted towards Partial Fulfillment for the Requirements of 5th Semester of

MASTER OF COMPUTER APPLICATION

Submitted By

Vikram Burman : 1703614959

Supervised by

Mr. Avneesh Vashistha

Department of Computer Application

Institute of Management Studies, Ghaziabad

Dr. A.P.J. Abdul Kalam Technical University

Lucknow, Uttar Pradesh

SESSION: 2018-2019

PROJECT ACCEPTANCE CERTIFICATE

This is to certify that project work entitled “**Lab Attendance**” by **Vikram Burman**, student of 5th Semester in **MASTER OF COMPUTE APPLICATION BATCHMCA-LE 2017-19** of **INSTITUTE OF MANAGEMENT STUDIES, GHAZIABAD** affiliated to **Dr. A.P.J ABDUL KALAM TECHNICAL UNIVERSITY, LUCKNOW**, hereby accepted for the partial fulfillment of **MASTER OF COMPUTER APPLICATION**.

Mr. Avneesh Vashistha
Project Supervisor

DECLARATION

I **Vikram Burman**, do hereby declare that the project work entitled **Lab Attendance** is an authenticated work carried out by me under the guidance of **Mr. Aravendra Sharma** for the partial fulfillment of **MASTER OF COMPUTER APPLICATION** and this work has not been submitted for similar purpose anywhere else except to **INSTITUTE OF MANAGEMENT STUDIES GHAZIABAD**, affiliated to **Dr. A.P.J. ABDUL KALAM TECHNICAL UNIVERSITY, LUCKNOW**.

Student Name : University Roll Number

Vikram Burman : 1703614959

ACKNOWLEDGEMENT

I would like to express my sincere gratitude to my supervisor, **Mr. Avneesh Vashistha**, for proper supervision and timely support. His wide knowledge, guidance and continuous encouragements have been a great help throughout our project work.

I would like to thank Dr. Sachin Malhotra (Dean-MCA), **Mr. Avneesh Vashistha** and all faculty members of *Department of Computer Application, Institute of Management Studies, Ghaziabad* who have given valuable guidelines and suggestions for completion of my project, and also motivated me throughout entire project.

Student Name : University Roll Number

Vikram Burman : 1703614959

INTRODUCTION

The project titled “**Lab Attendance**” is Lab management software for monitoring and controlling the management in a lab. This project is designed and coded in **Java Swing** and database management is handled by **MYSQL**. This software mainly focuses on basic operations in a library like **Admin Login, Add Pc Info, Assign Pc to Student, View Detail according to Pc, and Search and view Student with Attendance or using Pc Info**. “**Lab Attendance**” is a java application written on 64 bit, Window 8.1 operating system, designed to help users maintain and organize lab. This software is easy to use for both beginners and advanced users. It features a familiar and well thought out an attractive user interface, combined with strong searching insertion and reporting capabilities. The report generation facility of lab system helps to get a good idea of which are the system issued or returned by the members.

This software has five main modules:

Admin Login – Admin Friendly login screen

Add Pc Info – User friendly input screen.

Assign Pc to Student – Attractive Student Pc Assign screen.

View Detail According to Pc – Attractive Output Screen.

Search and view student with attendance or using info– Search for Student and Pc Data.

OBJECTIVE

To assist and easy the works of educational organizations, in particular, in Lab Attendance system is being developed. This would comprise the features that can be operated easily. Lab Attendance system would take care of the day to day records of all lab Activities. It covers activities from keeping the details of their issue date, deposit dates etc.

The final records are shown in data reports so that the activities can be operated easily.

So, the Lab Attendance systems assist the lab attendance of organizations in each and every aspect of in and out.

The lab attendance system is customized software and developed according to the needs of any type educational organizations.

Features

Manage the Pc info Student info in the lab.

Data reports

Easily maintainable and updateable

One software deals with multi- organizations lab attendance records management

Easy to handle

And lastly secured and reliable

BACK END OF PROJECT

DBMS stands for data base management system. It is the set of program to use or modified the data. A DBMS is a software Package design to define, change, retrieve, and manage data in data base.

MySQL is a fast, easy to use RDBMS being used for many small and big businesses. MySQL is developed, marketed, and supported by MS SQL AB, which is Swedish company. MySQL is becoming so popular because of many good reasons:

MySQL is very powerful program in its own right. It handles a large subset of the functionality of the most expensive and powerful database packages.

MySQL uses a standard form of the well known SQL data language.

MySQL works on many operating systems and with many languages including PHP, PERL, C, C++, JAVA, etc.

MySQL works very quickly and works well even with large data sets.

MySQL is very friendly to PHP, the most appreciated language for web development.

MySQL supports large database, up to 50 million rows or more in a table. The default file size limit for a table is 4 GB, but you can increase this to a theoretical limit of 8 million terabytes (TB).

MySQL is released under an open source license. So you have nothing to pay to use it

REQUIREMENTS AND ANALYSIS

The Lab Attendance Systems shall be required to maintain information about its users and also will help to give the whole detail of that user .

It shall store database for students, and Computer Systems.

The student's database stores information about a student id, student name, and course pc issued information and more.

The System's database stores information about a computer system, like Ram, Rom , Harddisk, and more.

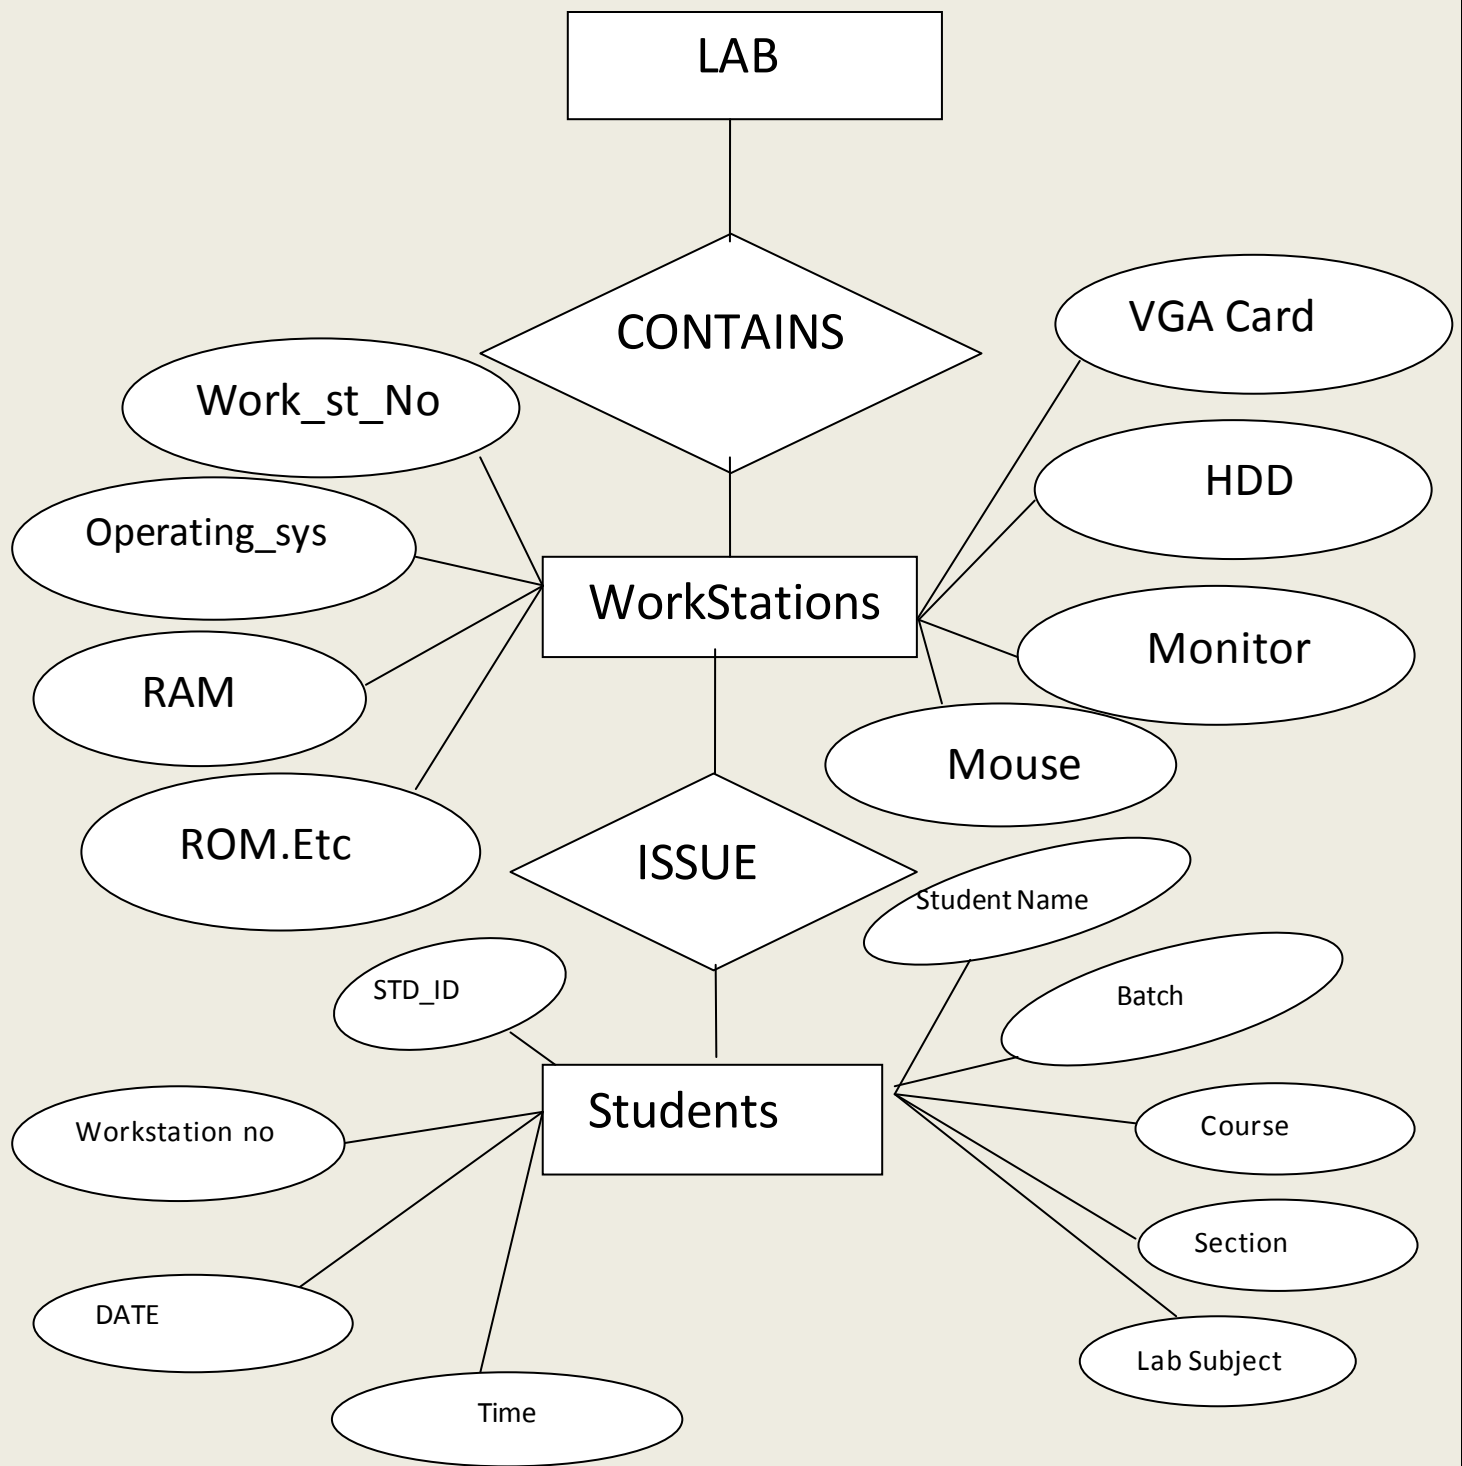

HARDWARE REQUIRMENTS:

| | | |
|--------------|---|--------------------------|
| Processor | : | Pentium 2.4 GHz or above |
| Memory | : | 512 MB RAM or above |
| Cache Memory | : | 128 KB or above |

SOFTWARE REQUIRMENTS:

| | | |
|------------------|---|---------------------|
| Operating System | : | Windows 7 and above |
| Front-End Tool | : | Java Programming |
| Back-End | : | MySQL |

E-R DIAGRAM OF LAB SYSTEM

Testing

Testing is a very critical activity that ensure the liability of a particular software product. During this activity the software to be tested is executed with a set of tests, and the output and functioning of the program are evaluated. It is done to ensure whether the system meets the specified requirement or not.

Testing can bring forth some aspects that have not been considered or covered by the developers. Testing a large program is a complex process that can be broken down into two parts:

- Unit Testing
- System Testing

In the first case of different modules of the application are tested individually. In case of system testing the software is tested as a whole. The system undergoes several tests like:

- Time tests
- Performance tests
- Memory tests
- Input and Output tests, etc.

Testing can be done in the following three phases:

- **Programmatic testing** – This is done to determine whether the application works according to the specifications. Here it is checked whether the application is providing all the required functionalities and features or not . All the validations are checked thoroughly. All the links are tested and the database functionalities are also checked.
- **User testing** – In this phase it is ascertained whether the target audience for the application can use the application easily and effectively. Is the software system is serving their purpose and fits their requirement or not .It is checked whether they are satisfied with the information provided. They are asked about the clarity, attractiveness and the overall presentation of the screen and reports.
- **Goal testing** – Finally this test is performed to test whether the application meets the goals, which were set before developing the application . Here it must be ensured that the organization is satisfied with the working and presentation of the application.

SYSTEM SECURITY

System security is responsible for controlling access to system resources, which will include sensitive data. The system must therefore include a certain amount of protection for such data, and must in turn control access to those parts of the system that administer this protection. In our system a good care has been taken for data security. The administrator has the control for all serious activities such as adding member, book issue, and book details. No user can delete the data without the permission of administrator. For users also there is id and password for accessing the account. So in this way the system is very much secured.

PHYSICAL SECURITY:

Physical security is often overlooked and its importance underestimated. In favor of more technical threats such as hacking, malware. However, breaches of physical security can be carried out with brute force and little or no technical knowledge on the part of an attacker.

Physical security has three important components:

- Access control
- Surveillance
- Testing

Future Scope

- ❖ This project has many features application like it can be used in any type of Computer Labe System.
- ❖ This project was build keeping in mind the major requirements of educational institution and they can be implemented in any such type of organization with very few modification.
- ❖ With modifications it can be possible for computer records to control organization by connecting them through a network. Because of this software all they need is a server application and any type of connectivity to that server.

LOGIN TABLE

```

Add view Details

The screenshot shows a window titled "PROJECT REPORT". It contains a table with the following data:

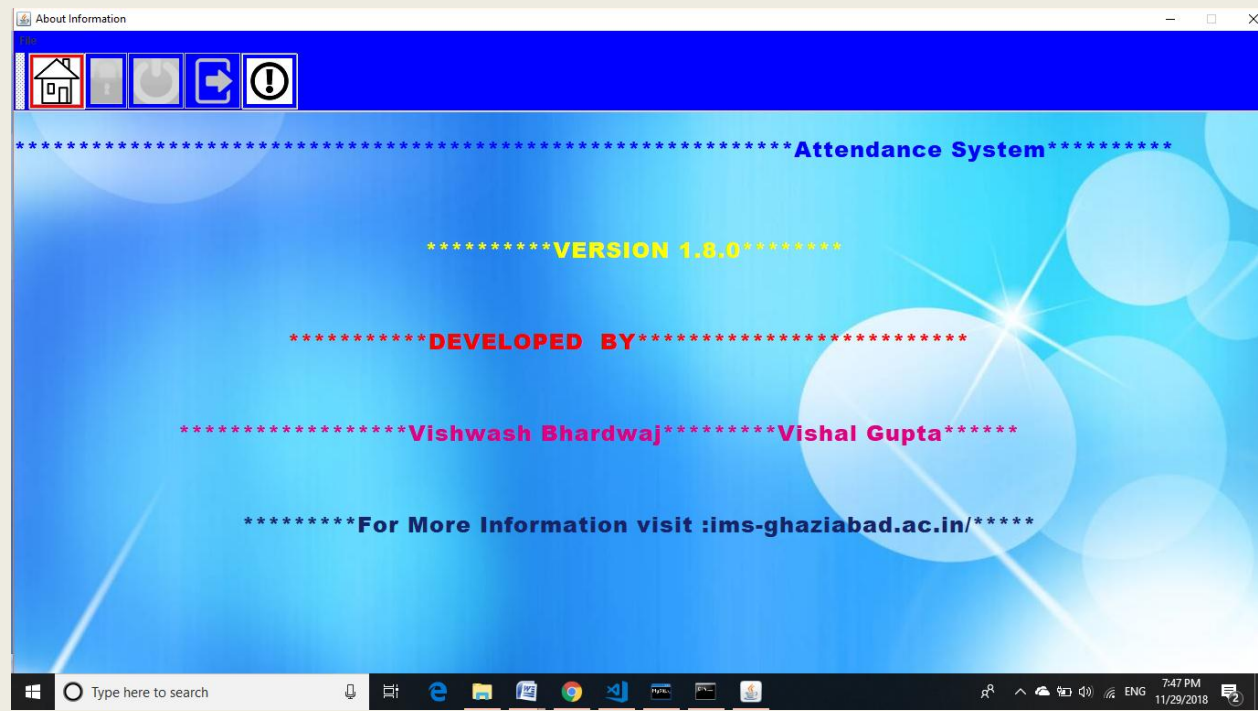

| workstation_no | operating_system | ram | hdd | vga_card | monitor | mouse | keyword |
|----------------|------------------|-----|------|----------|------------|-------|---------|
| 1 | Microsoft Window | 1 | 1000 | 500 MB | flat Panel | Wired | Wired |

Below the table is a large, empty white rectangular area for additional details. At the bottom of the window, there are two buttons: "Back" and "Clear".

View Student with Attendance

The screenshot shows a window titled "VIEW STUDENT WITH ATTENDANCE OR USING INFO". It features a green header bar with the title in white text. Below the header is a large, empty white rectangular area. At the bottom of the window, there are three buttons: "Back", "View Student", and "goto Search Student...".
